Appl'n No: 10/052,185

Amdt dated March 21, 2005

Reply to Office action dated Sept. 21, 2004

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A fuel tank assembly comprising:

a wall for enclosing a fluid;

said wall having an inwardly [[projecting]] flanged lip forming an opening extending

through a portion of said wall and defining a first sealing surface along the circumferential

periphery [[thereof]] of said lip;

a removable lid for closing said opening in said wall, said lid having an outer peripheral

part defining a second sealing surface along the circumferential periphery thereof facing said

first sealing surface when said lid is seated in said opening;

first and second spaced apart radial grooves formed in at least one of said first and second

sealing surfaces;

first and second sealing rings seated in said first and second grooves respectively for

sealing engagement between said first and second sealing surfaces when said lid is closed against

said opening; [[and]]

a sealing gap formed between said first sealing surface and the part of said second sealing

surface extending between said spaced apart radial grooves for limiting the contact surface area

of fuel vapors with said second sealing ring and thereby increase the permeation resistance of

said sealing engagement between said lid and said opening; and

Reply to Office action dated Sept. 21, 2004

a reinforcement member fixedly secured to the inside of said wall forming a surrounding

shoulder which supports said circumferential periphery of said inwardly flanged lip defining said

opening for supporting said lip against the sealing forces between said first and second sealing

surfaces from said lid closing against said opening.

2. (Cancelled)

3. (Currently Amended) A fuel tank assembly as set forth in claim [[2]] 1 wherein

said first and second sealing surfaces extend substantially parallel and conically inwardly into

said opening.

4. (Previously presented) A fuel tank assembly as set forth in claim 3 wherein said

first and second grooves extend radially around the circumference of said second sealing surface

defined by said lid.

5. (Cancelled)

6. (Currently Amended) A fuel tank assembly as set forth in claim [[5]] 4 wherein

said reinforcement member includes an inwardly flanged collar and said peripheral part of said

lid includes an outwardly flanged collar for overlapping engagement with said collar of said

reinforcement member to secure said lid against said opening.

7. (Cancelled)

3

Appl'n No: 10/052,185 Amdt dated March 21, 2005

- 8. (Cancelled)
- 9. (Cancelled)
- 10. (Cancelled)
- 11. (Previously presented) A fuel tank assembly as set forth in claim 6 wherein said first sealing ring is a liquid seal seated in said first groove adjacent said opening of said fuel tank for sealing liquid fuel in said fuel tank.
- 12. (Previously presented) A fuel tank assembly as set forth in claim 11 wherein said second sealing ring is a fuel vapor seal made of an elastomer with high permeation resistance seated in said second groove and spaced from said first sealing ring by said sealing gap for sealing fuel vapor in said fuel tank.
